POLYURETHANE TIMING BELTS

POLYURETHANE TIMING BELTS

BRECOflex CO., L.L.C. was founded in 1989 with an unwavering commitment to excellence in the products we bring to the market, the customers we serve and the people we employ, who are dedicated to meet our customers' highest expectations. Our products offer superior quality and innovative design features to meet your most challenging requirements of today and in the future.

BRECOflex CO., L.L.C. translates the customers' needs into new and expanded product lines. We are committed to partner with our customers in providing unique solutions and superior service for the long term.

BRECOflex CO., L.L.C., the world leader in the polyurethane timing belt industry, sets higher standards with new state-of-the-art product designs. Diverse timing belt products, metal pulleys and accessories are scientifically designed and manufactured for undeviating precision and quality. It is our mission to provide our customers with outstanding products and technical support from the initial design phase through to after-sales-service.

BRECOflex CO., L.L.C.'s polyurethane timing belts and drive components are specified by OEM's more often than any other brands and they are used in many diverse industries and applications worldwide.

BRECOflex CO., L.L.C. offers the most comprehensive product range with more than

POLYURETHANE TIMING BELTS

100 tooth configurations and new leading edge timing belt designs such as ARC-Power® , ATN® - Convertible Timing Belt system and REDFLEX GEN III. See Table Of Contents for a complete listing of all timing belt types available.

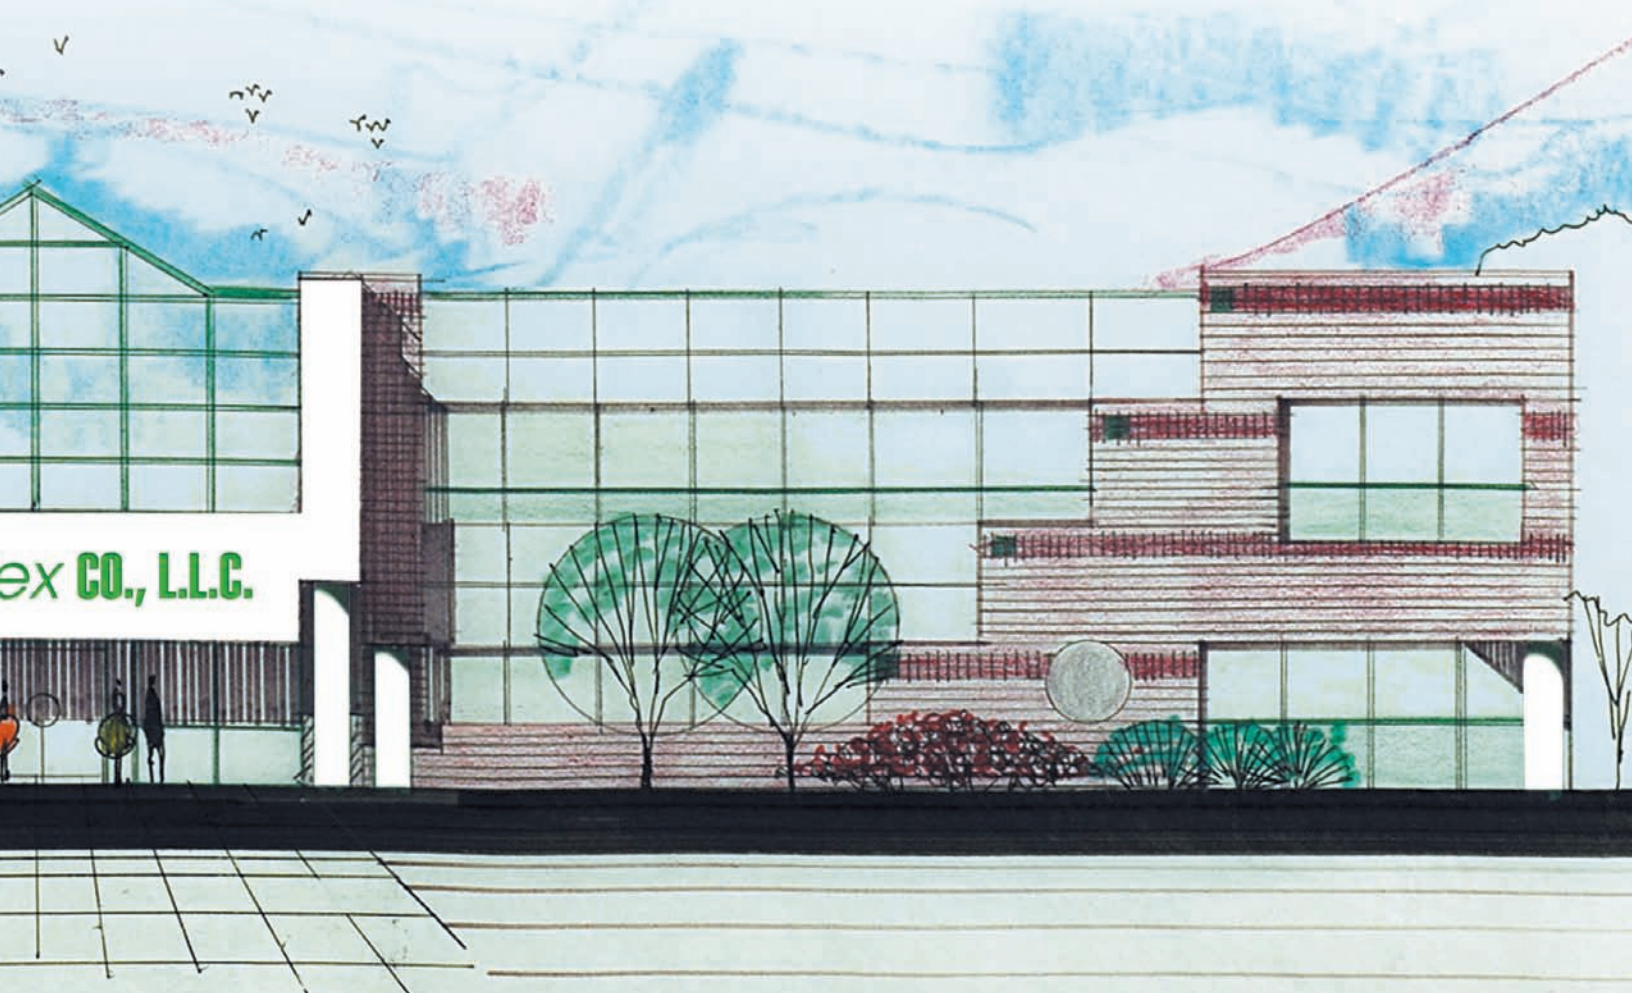

BRECOflex CO., L.L.C. is ISO 9001 certified in recognition of its quality management system and provides evidence of conformance with ISO's internationally accepted standards of quality assurance.

This very comprehensive catalog illustrates the many basic timing belt designs available and does not list the various special and customized timing belts we manufacture on a regular basis. If you cannot find the perfect timing belt type for your requirements, we will design one just for your individual needs.

Please contact us so that we may assist and support you with your timing belt design needs.

OUR COMMITMENT

- To maintain leadership by professionally supporting our customers with high precision polyurethane timing belts, metal pulleys, woven endless flat belts and accessories for: Conveying, Driving, Indexing, Linear Drive, and Power Transmission Applications
- To meet customer requirements and continually improve quality through:
 - Advancement of product technology
 - State-of-the-art business and information systems
 - Broadening manufacturing capabilities
 - Highly skilled and trained personnel
 - Maintaining mutually beneficial relationships with customers and suppliers
- To provide our customers with outstanding products, engineering support and customer service to meet their highest expectations

POLYURETHANE TIMING BELTS

POLYURETHANE TIMING BELT DESIGN

Timing Belt shown with belt back cover and nylon facing

BRECOflex CO., L.L.C., the world leader in the polyurethane timing belt industry, manufactures high precision timing belts made of many advanced materials which are selected for their unique properties. BRECO® and BRECOFLEX® timing belts are extruded of wear resistant polyurethane materials and high tensile braided steel tension members. For special applications Kevlar® and stainless steel tension members are also available. The combination of the superior materials results in precision products with a fine balance of high strength and high flexibility.

BRECOflex CO., L.L.C. drive components distinguish themselves with the following characteristics:

- **Superior Bonding** of tension members and polyurethane for high efficiency and for high torque applications
- **High Spring Rate** tension members for high accuracy, high repeatability, and short settling times
- **Superior Performance** and **Long Service Life** due to the perfect combination of strength and flexibility
- **Dimensionally Stable** due to high quality standards in manufacturing
- **Maintenance Free** belt systems require virtually no retensioning as tension members do not permanently elongate (no stretch)

BRECOflex CO., L.L.C. offers the most comprehensive and innovative product range for designing state-of-the-art drive applications for conveying, driving, indexing, linear drives and power transmission. The design engineer can select from more than 100 standard timing belt tooth configurations of polyurethane timing belts. In addition special belt modifications are offered.

POLYURETHANE TIMING BELTS

Characteristics

Mechanical:

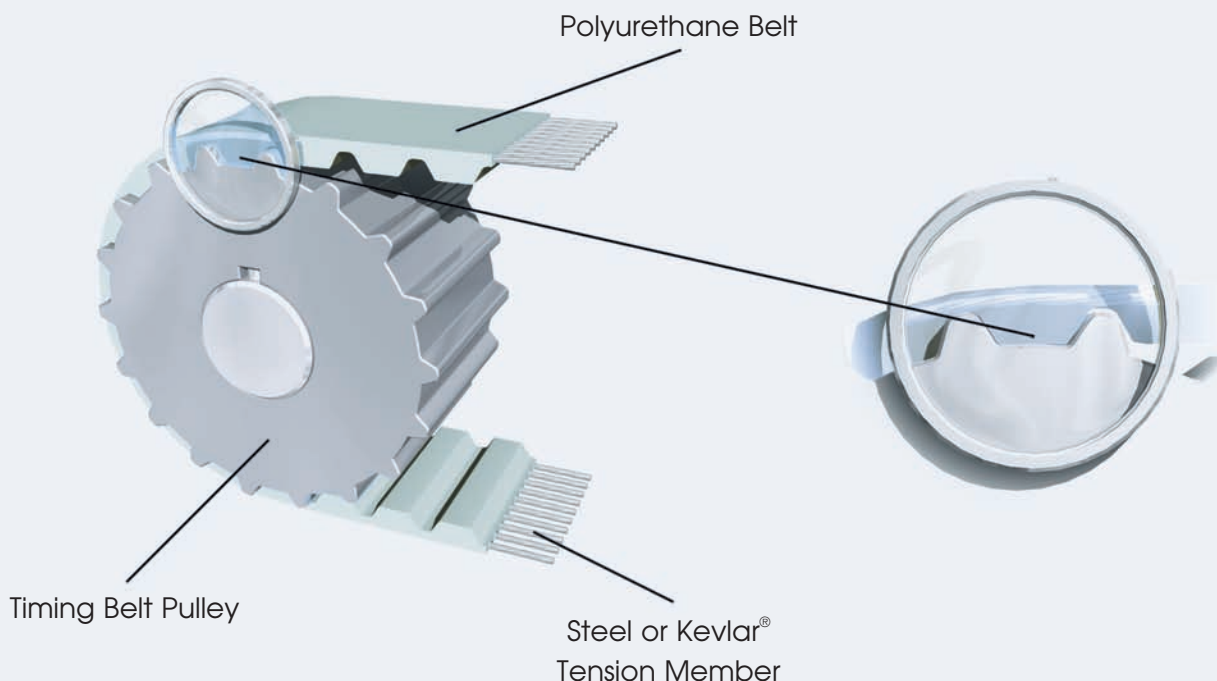

- positive, synchronous drive
- constant length, no post-elongation
- low running noise
- wear resistant
- highly flexible
- positional and angular accuracy
- no maintenance
- low pre-tension
- low bearing and shaft load
- fatigue-resistant
- compact design
- belt speed up to 80 m/s
- crossed belt drives
- low inertia – high power

- high efficiency up to 98%
- long belt lengths possible
- large transmission ratios
- no lubrication required
- non-marking

Chemical:

- hydrolysis-resistant
- aging-resistant
- temperature range:
standard 0°C to +80°C, options from -30°C to +110°C
(standard +32°F to +176°F, options from -22°F to +230°F)
- resistant to simple oils, greases, fats and benzene
- resistant to some acids and bases

Tooth engagement (AT-Series)

POLYURETHANE TIMING BELTS

TIMING BELT VERSIONS – CODES

Open Ended – Code “M” –

BRECO M timing belts are manufactured as open ended belts with bifilar, parallel tension members. The most common application is linear drives, in which rotary motor motion is translated into linear movement.

- High speed, up to 80 m/s
- High spring rate
- Any length available
- Various polyurethane materials available

Applications: Linear Drives

Spliced and Welded Endless – Code “V” –

BRECO V timing belts are spliced and welded endless from open ended roll stock. The timing belt ends are joined together in a heat welding process. Virtually any length is possible and can be determined in one tooth increments. One half of the tension members transmit load in the weld area. Preferred for conveying belts, profiled belts, covered belts and general purpose applications.

- Can be profiled and machined
- Any length available
- Many facings are offered
- Various polyurethane materials available

Applications: Conveying

Truly Endless BRECOFLEX – Code “BFX” –

BRECOFLEX BFX versions are manufactured as truly endless timing belts resulting in timing belts with no interruptions or joints. Two bifilar tension members are helically wound throughout the timing belt for superior strength and true tracking. All tension members carry full load throughout the entire timing belt length.

- High speed, up to 80 m/s
- High strength, up to 200 kW (275 hp)
- Wide range of standard sizes
- Long lengths available (up to 22 meters)

Applications: Power Transmission

POLYURETHANE TIMING BELTS

TOOTH PROFILES

T-Series

page 20 - 29

Standard timing belt for conveying and moderate power transmission applications

- Manufactured to DIN 7721
- Flexible for back bending applications
- Used for profiled belts with metric profile spacing
- Wide range of pitch sizes (2.0 mm to 20.0 mm)
- Wide range of belt widths (up to 150 mm)
- Bifilar tension member design for true tracking

AT-Series

page 30 - 37

High strength timing belt for power transmission and high accuracy positioning applications

- High strength tension members (up to twice as strong as standard T-Series and Imperial pitch belts)
- Increased tension member spring rate for better repeatability and reduced settling time
- High tooth shear strength (up to 45% higher than standard T-Series and Imperial pitch belts)
- Reduced backlash (zero backlash pulleys available for highest accuracy)
- Bifilar tension member design for true tracking

REDFLEX GEN III-Series

page 38 - 41

Highest strength timing belt available utilizing advanced materials for demanding power transmission applications

- More densely wound bifilar tension members for true tracking, up to 40% more tensile strength than AT-Series
- Increased tension member spring rate for better repeatability and reduced settling time
- High performance polyurethane for up to 60% higher tooth shear strength and improved service life
- Temperature range up to 100°C
- Used with standard AT-Series pulleys
- Available in AT3, AT5, AT10 and ATP10

ATN-Series

page 42 - 44

Most advanced profile timing belt system utilizing molded belt cavities and specially designed inserts allowing profiles to be mechanically fastened

- Quick and easy profile change (variable profile pitch)
- Various profile materials can be utilized
- No belt disassembly necessary to change profiles
- Connecting kit available for field assembly
- ATN components available in nylon, brass, stainless steel
- Alternative to chain with the advantages of a timing belt

TOOTH PROFILES

ATL-Series

page 45 - 47

Special linear drive belt designed for the highest accuracy

- Predictably negative belt length tolerance to allow near perfect length tolerance after proper pretensioning
- Larger tension members than AT-Series for the highest tensile strength and spring rate for better repeatability and reduced settling time
- Used with standard AT-Series pulleys (zero backlash pulleys available for highest accuracy)
- Bifilar tension member design for true tracking
- Available in ATL5, ATL10, ATL20

ATP-Series

page 48 - 49

Specially designed power transmission belt available for replacement and existing OEM equipment

- High tooth shear strength from modified tooth design
- More uniform stress distribution
- Noise reduction
- Available in ATP10 and ATP15

Imperial-Series

page 50 - 59

Standard timing belt for driving and conveying applications

- Manufactured to ANSI/RMA standard
- Used for profiled belt applications with inch based profile spacing
- Upgrade neoprene belts to high performance polyurethane belts without replacing pulleys
- Wide range of pitch sizes (MXL, XL, L, H, XH)

Self-Tracking-Series

page 60 - 77

Self-tracking timing belt with center guide

- No pulley flanges necessary
- Suitable for side loading
- Tracking guides available in K6 and K13
- Timing belts available in most pitches with molded, homogeneous, serrated guides for the best belt performance and flexibility
- Solid tracking guides can be added to any belt in all pitches

POLYURETHANE TIMING BELTS

TOOTH PROFILES

ARC-Power Self-Tracking-Series

page 78 - 81

Revolutionary Arc shaped tooth timing belt represents the most unique and efficient timing belt available

- No pulley flanges necessary
- Smooth tooth engagement – Arc shaped belt teeth are continuously engaging
- Reduced polygonal effect for less vibration
- Reduced noise level
- No lateral movement for high efficiency
- Designed with high strength AT tooth profile
- Bifilar tension member design for true tracking

SFAT Self-Tracking-Series

page 82 - 87

Split tooth timing belt design for high power, bidirectional self-tracking applications

- No pulley flanges necessary
- Designed with high strength AT tooth profile
- Increased tension member spring rate for better repeatability and reduced settling time
- Used with SFAT pulleys
- Bifilar tension member design for true tracking
- Available in SFAT10, SFAT15 and SFAT20

Double Sided Series

page 88 - 98

Double sided timing belt transmits power on both sides

- Offset tooth design reduces polygonal effect and stress concentration
- Flexible tension members for long service life (Hi-Flex cables available for extreme bending)
- Available in T, AT, Imperial and Self-Tracking
- BRECOFLEX truly endless available up to 22 meters for high speed, high power
- BRECO V spliced and welded endless available up to 50 meters

HTD-Series

page 99 - 104

HTD belting offered with the benefits of advanced polyurethane and steel tension members

- Manufactured to ANSI/RMA standard
- Upgrade neoprene power transmission belts with truly endless high performance polyurethane timing belts (HTD 8M) without replacing pulleys
- High Power (HP) open ended belting with high strength, and high spring rate used for linear drives – 3M, 5M, 8M, 14M
- High Flex (HF) spliced and welded endless belts for conveying and moderate power transmission applications

TOOTH PROFILES

STD-Series

page 105 - 106

STD belting offered with the benefits of advanced polyurethane and steel tension members

- Manufactured to ANSI/RMA standard
- High Power (HP) open ended belting with high strength and high spring rate used for linear drives – S5M, S8M
- 30 meter rolls standard

Other Timing Belts

page 107 - 125

Special pitch polyurethane timing belts available for:

- Current designs
K1, K1.5
- Replacement on older machines
single sided: AR, BR, CR, DR, V
double sided: AR-DL, CR-DL, DR-DL, V-DL

Supported Polyurethane Flat Belt Series

page 126 - 133

Polyurethane flat belt steel reinforced for conveying

- Alternative to standard flat belts
- High spring rate and high tensile strength
- Wear and abrasion resistant polyurethane for longer service life
- Available in 1, 2, 3 and 6 mm

FERROPAN Polyurethane V-Belt Series

page 134 - 135

Polyurethane V belt steel reinforced for conveying

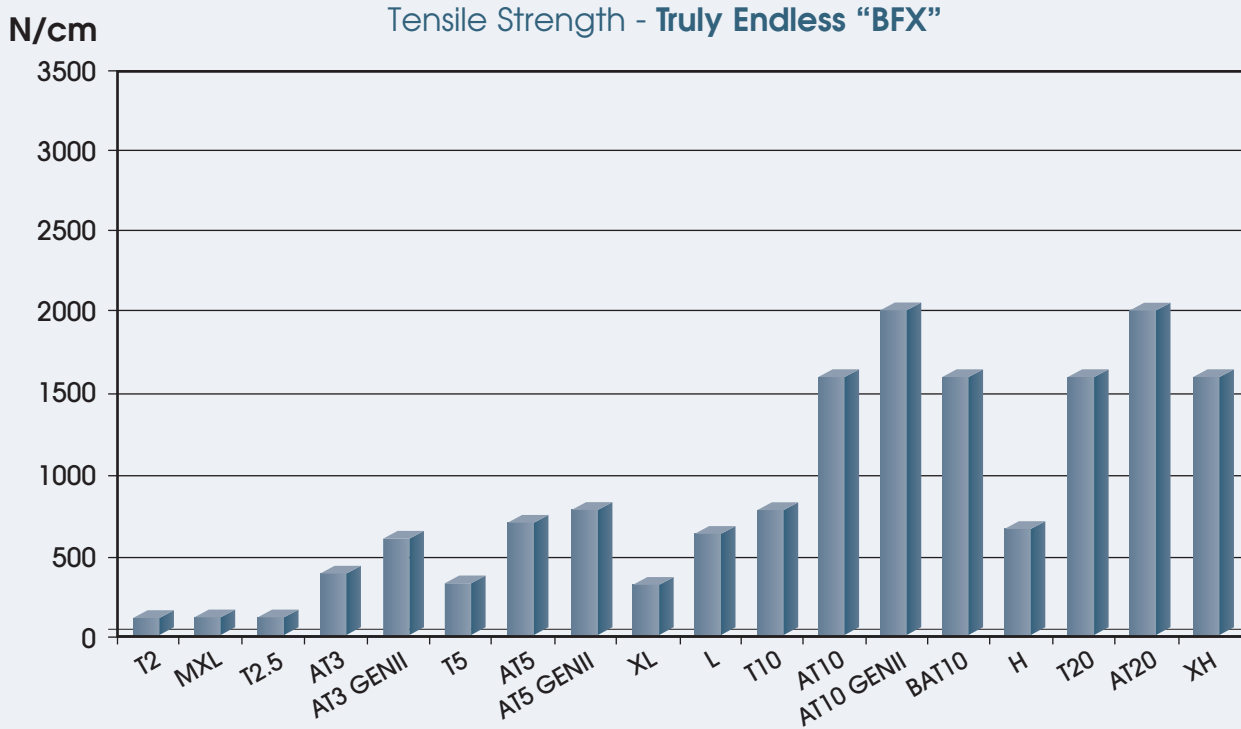

- Reinforcement improves spring rate and strength
- Wear and abrasion resistant polyurethane for longer service life
- Ideal for long length conveying applications

Belt widths b (mm)	13	17	20	30	32
Belt height h (mm)	6.5	11	10	15	20
Pitch (serration) † (mm)	8	10	10	15	15
Angle α	38°	38°	38°	38°	38°
hw-Value	3.25	4.0	5.0	9.0	8.0
Coefficient of friction (steel)	0.7	0.7	0.7	0.7	0.7
Minimum joined length (mm)	1200	1500	1600	2010	2505

Length of V-Belt can be specified in pitch increments.

Ordering example: FERROPAN V-Belt **20** FERROPAN / **2360** V

Belt Width _____
 Pitch _____
 Length _____
 Joined Length Code V _____

POLYURETHANE V-BELT-SERIES

FERROPAN

STEEL Tension Member — standard

TIMING BELT OPTIONS

PAZ

Nylon facing on tooth side

- Reduced coefficient of friction
- Improved belt/pulley engagement
- Reduced noise and vibration
- Lower friction force when used with metal support

Suffix: PAZ

PAR

Nylon facing on belt back

- Reduced coefficient of friction
- Ideal for accumulator conveyor
- Resistant to most oils and greases

Suffix: PAR

PAZ-PAR

Nylon facing on tooth side and belt back

- Reduced coefficient of friction
- Resistant to most oils and greases
- Combines advantages of PAZ and PAR

Suffix: PAZ-PAR

T-Cover

Extra thick polyurethane belt back cover

- 85 durometer
- 2 mm thick (T5 1.5 mm)
- Wear and abrasion resistant
- Higher friction ideal for smooth surfaces, i.e. glass, metal, wood

Suffix: T

DR

Extra thick polyurethane belt back

- Homogeneous
- Perfect for longitudinal and/or lateral machining
- Extended service life for high wear (abrasive) conveying applications

Suffix: DR

DL

Double sided timing belt

- Transmits power on both sides of the belt
- Ideal for serpentine drives
- For available pitches see page xyz-sdf

Suffix: DL

Add above suffix to timing belt part number, for example: 25 T10 / 5000 V **PAZ-PAR**

POLYURETHANE TIMING BELTS

TIMING BELT MATERIALS

BRECOflex CO., L.L.C. manufactures high precision timing belts with the most advanced materials available. Extremely wear resistant polyurethane materials and high tensile braided steel tension members or Kevlar® tension members are selected for their unique properties. The combination of the superior materials results in timing belts with a fine balance of high strength and high flexibility. BRECOflex CO., L.L.C. offers the best performing timing belts available in the market place.

Strength and Flexibility – The Perfect Combination

Polyurethane

Polyurethane is the obvious choice for high strength timing belts. BRECOflex CO., L.L.C. offers many polyurethane polyester elastomers to meet various application requirements.

NOTE: Certain materials may require minimum quantities.

All of our many specially selected polyurethane materials offer the following properties:

- extremely wear resistant
- extensive temperature range
- resistant to petroleum, oils and fats
- ozone and sunlight resistant
- no lubrication required
- high tooth shear strength
- high tear resistance
- allows belt processing with no loss in material properties
- non-marking

General Use:

Type	Products	Color	Hardness	Temperature range	Comment
TPU-ST1	all belt types, BFX-belts > 720mm, profiles	white (special colors available)	92 Shore A	0°C to +80°C (+32°F to +176°F)	- great performance characteristics - suitable for most applications - standard material with steel cord
TPU-ST2	all belt types, BFX-belts > 720mm, profiles	transparent	85 Shore A	+5°C to +50°C (+41°F to +122°F)	- higher coefficient of friction - softer profile material - flexible at lower temperature - increased resistance to hydrolysis - standard material with Kevlar® Cord
TPU-ST3	BFX-belts ≤ 720mm	transparent	92 Shore A	0°C to +80°C (+32°F to +176°F)	- meets FDA-Regulations
TPU-N1	profiles	white	96 Shore A	0°C to +80°C (+32°F to +176°F)	- high wear resistance - for thin wall profiles
TPU-N2	profiles	transparent	98 Shore A	0°C to +80°C (+32°F to +176°F)	- high wear resistance - for thin wall profiles - fiber glass reinforced
TPU-B1	profiles	transparent	60 Shore A	0°C to +80°C (+32°F to +176°F)	- highly flexible - high coefficient of friction - delicate product conveying

NOTE: Standard temperature ranges may be exceeded under specific conditions.

Please contact BRECOflex CO., L.L.C. Engineering Department for further information.

POLYURETHANE TIMING BELTS

General Use (cont.) :

Type	Products	Color	Hardness	Temperature range	Comment
PA-N1	ATN-profiles	black	—	0°C to +80°C (+32°F to +176°F)	- contact temp. up to 120°C - E-modulus: 14.500 N/mm ² - fiber glass reinforced
TPU-SM1	ATP-Timing Belts	transparent	92 Shore A	0°C to +80°C (+32°F to +176°F)	- for ATP timing belts only

Food Grade:

Type	Products	Color	Hardness	Temperature range	Comment
TPU-FDA1	all belt types, all BFX-belt sizes, profiles	transparent	92 Shore A	0°C to +80°C (+32°F to +176°F)	- suitable for intermittent cleaning with diluted cleaning agents - meets FDA-Regulations
TPU-FDA2	all belt types, BFX-belts > 720mm, profiles	transparent	85 Shore A	+5°C to +50°C (+41°F to +122°F)	- suitable for intermittent cleaning with diluted cleaning agents - higher coefficient of friction - meets FDA-Regulations
TPU-AU1	all belt types, BFX-belts > 720mm, profiles	transparent	92 Shore A	0°C to +50°C (+32°F to +122°F)	- suitable for continuous cleaning with diluted cleaning agents - meets FDA-Regulations

Low Ambient Temperatures:

Type	Products	Color	Hardness	Temperature range	Comment
TPU-KF1	all belt types, BFX-belts > 720mm, profiles	transparent	85 Shore A	-25°C to +5°C (-13°F to +41°F)	- reduced strength during cold start up - high resistance to hydrolysis and bacteria
TPU-KF2	all belt types, BFX-belts > 720mm, profiles	transparent	82 Shore A	-30°C to -10°C (-22°F to +14°F)	- reduced strength during cold start up - high resistance to hydrolysis

High Ambient Temperatures:

Type	Products	Color	Hardness	Temperature range	Comment
TPU-WB	all belt types, profiles	white	94 Shore A	+20°C to +110°C (+68°F to +230°F)	- reduced strength during high temperature operation - not available with PAZ and PAR

NOTE: Standard temperature ranges may be exceeded under specific conditions.

Please contact BRECOflex CO., L.L.C. Engineering Department for further information.

POLYURETHANE TIMING BELTS

TENSION MEMBERS

High strength steel or Kevlar® tension members are the perfect match for our advanced polyurethane materials. The selected cords give BRECOflex timing belts low elongation for high accuracy and high flexibility for long service life. In addition, with no permanent elongation, retensioning over time is not required.

These special tension members provide the following superior timing belt characteristics:

- highest efficiency
- most desirable strength/flex characteristics
- maximum accuracy
- high repeatability
- extreme flexibility
- compact design
- outstanding reliability
- long service life

The following tension member types are available to meet your specific application requirements:

High Carbon Steel

- standard tension member
- mild corrosion resistance
- high spring rate

Kevlar®

- excellent chemical and corrosion resistance
- non-metallic
- also available with Food Grade Urethane materials

Stainless Steel

- chemical and corrosion resistance
- also available with Food Grade Urethane materials
- high spring rate

Hi-Flex Steel

- extended belt life (frequent bending and/or small pulley diameters)
- mild corrosion resistance
- high spring rate

TENSION MEMBER ARRANGEMENT

Balanced Tension Member Arrangement for true tracking - Bifilar Design

The bifilar tension member arrangement is the most advanced concept in tension member placement. Tension members with "S" (left-hand lay) and "Z" (right-hand lay) are used alternately to balance the timing belt for true tracking.

BRECO V spliced and welded endless belts and BRECO M open ended belting are produced in the bifilar tension member arrangement spaced parallel and symmetrical across the timing belt width. The tension member diameter and cable spacing determine the tensile strength which is appropriate for each timing belt pitch.

BRECOFLEX truly-endless timing belts are manufactured with two helically wound tension members in the bifilar arrangement across the entire timing belt width. The result is a completely continuous uninterrupted timing belt with no joints. Tracking is greatly improved with the BRECOflex CO., L.L.C. truly endless bifilar design compared to standard single lay tension member designs.

Tension Free Zones

Tension free zones are available with most timing belts. Special processes allow sections of timing belt widths to be manufactured with no tension member reinforcement. Tension free zones allow for very clean vacuum hole perforation, longitudinal grinding or virtually no tension member penetration with truly endless BRECOFLEX timing belts.

Sealed Edges

BRECO M open ended and BRECO V spliced and welded endless timing belts are designed with tension member arrangements that provide the advantage of sealed edges for standard belt widths. Special belt widths are possible. Minimum quantities are required.

Advantages of sealed edges:

- reduce belt edge wear
- prevent pulley damage
- smoother running
- safer operation

POLYURETHANE TIMING BELTS

Strength and Flexibility

The timing belt strength and spring rate is determined by the tension member construction and placement. BRECOflex CO., L.L.C. utilizes an advanced tension member construction with many small diameter filaments to achieve a strong and flexible timing belt. Competitive designs are stiffer and are more prone to fatigue of the tension members, resulting in reduced service life.

The tension member construction also greatly influences the tooth shear strength and the power that can be transmitted. The BRECOflex CO., L.L.C. design allows the urethane to fully bond all strands within a tension member cord. Competitive designs only encapsulate the outer layer of the tension member, leaving voids at the inner section of the cord. **Comparative bonding pull tests have shown that BRECOflex CO., L.L.C. timing belts achieve up to 40% higher bonding strength.**

Tension Member Cross Sections and Bonding Characteristics

BRECOflex CO., L.L.C.

Competition

POLYURETHANE TIMING BELTS

Comparative Pull Test at Equal Force

BRECOflex CO., L.L.C.

Advantages of BRECOflex CO., L.L.C. Tension Member Construction

- Higher efficiency
- Higher flexibility
- Longer service life
- Superior bonding

Competition

Options

For special application requirements: tension member diameters, filament diameters, construction, and spacing can be tailored to meet specific needs.

Hi-Flex

Hi-Flex timing belts achieve a higher flexibility and equal strength with an increased number of smaller diameter filaments, providing extended service life in applications with frequent bending and small pulley diameters.

Increased diameter

Timing belts with larger cord diameters achieve a higher tensile strength and spring rate for long belt length applications and high power requirements.

POLYURETHANE TIMING BELTS

TIMING BELT BACKINGS

Belt backings are available in a wide variety of cover materials which are bonded to the back of a timing belt. Superior know-how and state-of-the-art processes assure a strong high performing bond to the polyurethane belt materials.

	Backing Type	Backing Material	Color	Hardness (Shore A) Density (g/dm ³)	Coefficient of Friction (μ) (static AL)	Thickness (mm)
	Linatex	Natural Rubber	Red	35	1.1	1.6 - 20
	Supergrip	PVC	Blue Green	30	0.8 0.6	4
	T-Cover / PUR 385	Polyurethane	Transparent	85	0.3 - 0.7	1.5 - 6.0
	PU Yellow	Polyurethane - foam	Yellow	55	0.6	2.0 - 10.0
	PVC Blue	PVC	Blue	40	1.0	1.0
	Correx Gum	Natural Rubber	Brown	40	0.9	6.0 / 10.0
	Porol	Cellular Polyurethane	Black	190 g/dm ³	0.8	3 / 5 / 10
	Celloflex	Microcellular Polyurethane	Beige	350 g/dm ³	0.3	2 / 3 / 5
	White Nub	PVC	White	55	0.6	1.65
	D 15	Polyurethane	Natural Green Blue	70	0.8	1.0 - 5.0

POLYURETHANE TIMING BELTS

Modern backing processes allow covering any polyurethane timing belt. The selection of the most appropriate and best performing backing material depends on the backing characteristics required by each specific application. For more information please see catalog **B208 "Timing Belt Backings"**.

<i>Temperature Range</i>	<i>Resistivity</i>	<i>Applications</i>	<i>Characteristics</i>	<i>Bending Ability*</i>

POLYURETHANE TIMING BELTS

POLYURETHANE TIMING BELTS

TIMING BELT MODIFICATIONS

BRECO® and BRECOFLEX® timing belts can be mechanically machined and modified to meet special application requirements. Contact Applications Engineering for design assistance.

Lateral Machining

- Typically used with extra thick belt back "DR" or "T-Cover" (see page 149)
- Used for small parts conveying
- Used for incline conveying
- Standard and custom configurations available
- Increased flexibility

Longitudinal Machining

- Typically used with extra thick belt back Type DR or belt cover Type T for more design possibilities
- Used for longitudinal product conveying
- Combined with perforations for vacuum applications
- Used to align product during handling

Back Grinding

- Improved belt thickness tolerance
- Consistent belt back surface finish and friction
- Roughened belt back for BRECO V spliced and welded endless belts
- Standard for BRECOFLEX truly endless belts >720 mm
- Available for BRECO V belts >450 mm
- Available for BRECOFLEX truly endless belts between 450 and 720 mm

Edge Grinding

- Improved belt width tolerance
- Less lateral movement
- Used to more accurately position mechanical modifications (i.e., profiles, perforations, etc.)

Tooth Removal

- Used to produce accurate pockets for product conveying (double sided belt shown)
- Facilitate mounting attachments (single sided belt not shown)
- Used as reference point (i.e., with optical sensors)

Longitudinal Tooth Machining

- Ideal for vacuum applications – combined with perforations along belt length (reduced vacuum loss)
- Used for belt tracking without pulley flanges
- Multiple grooves possible

Perforating

- Used for vacuum applications
- Intricate hole patterns possible
- Used with tension free zones resulting in clean holes with no tension member interference
- Complex perforation shapes possible

Covered Belt Machining

- All timing belt modifications may be possible for covered belts

POLYURETHANE TIMING BELTS

TIMING BELT PULLEYS

To successfully optimize a timing belt drive system, the quality level of the timing belt and the timing pulleys is crucial. BRECOflex CO., L.L.C. has the know-how and the technical capabilities as a single source supplier to provide high quality matching timing belts and timing pulleys for superior drive performance.

Note: For more information, see **Pulley Catalog B216**

PULLEY MATERIALS AND FINISHES

The following pulley materials and surface finishes are available to meet your specific application requirements. Special materials on request.

Materials

Aluminum (AL)

- Suitable for moderate power transmission
- Light weight / reduced rotational inertia
- Moderate chemical and corrosion resistance
- Standard material for stock pulleys

Stainless Steel (VA)

- Suitable for high power transmission
- Durable / abrasion resistant
- Meets FDA regulations
- Excellent chemical and corrosion resistance

Steel (ST)

- Suitable for high power transmission
- Durable / abrasion resistant
- Limited chemical and corrosion resistance

Delrin (POM)

- Limited power transmission
- Excellent chemical and corrosion resistance
- Non metallic

Surface Finishes

Aluminum

Anodized

- Increased chemical and corrosion resistance
- Available in clear, black, or colored
- Limited increase of surface hardness
- Aesthetic treatment

Hard Anodized

- Excellent chemical and corrosion resistance
- Increased surface hardness
- For abrasive environments

Steel

Black Oxide

- Increased chemical and corrosion resistance
- Aesthetic treatment

Zinc plated

- Increased corrosion resistance

Chromate

- Increased chemical and corrosion resistance

Nickel plated

- Increased chemical and corrosion resistance

Pulley Flanges

Flanges are attached to the pulleys by a rolling process or fastened with screws depending on tooth profile and pulley diameter. Small and medium pitch pulleys up to approximately 250 mm in diameter are usually supplied with rolled on flanges. Large pitch pulleys such as T20, AT20 and XH are commonly supplied with screwed on flanges.

Flange Material

Standard: zinc plated steel

Optional: stainless steel – meets FDA regulations, chemical and corrosion resistant
aluminum – economical alternative to stainless steel flanges

POLYURETHANE TIMING BELTS

STOCK PULLEYS

The BRECOflex CO., L.L.C. pulley stocking program includes the pulley configurations listed below. Stock pulley material is aluminum with zinc plated steel flanges. Select the standard pilot bore or incorporate custom modifications, some of which are listed at the bottom and shown on the opposite page. Modified stock pulleys, in small quantities, are usually delivered in one week.

Pitch	teeth range (not all # of teeth available)		stock pulleys available for belt widths (mm)	Pitch	teeth range (not all # of teeth available)		stock pulleys available for belt widths (mm)
	from	to			from	to	
T2.5	10	60	6,10	XL	10	40	12.7, 25.4
T5	10	60	10, 16, 25	L	10	25	25.4, 50.8

ATL10	25	60	25, 32, 50				

All stock timing belt pulleys can be customized and modified to specific requirements. Complex machining and intricate details can be realized. These modifications can include but are not limited to the following:

- add/remove flanges
- finish bore
- remove or change hub
- cut key seat
- reduce pulley width
- counter bores
- set screws
- taper bores
- bolt holes
- snap ring grooves
- lightening holes
- self-tracking groove

Please provide your requirements to BRECOflex CO., L.L.C. Engineering Department.

Pulley bar stock with blind holes is available in all pitches. Common pitches are stocked.

PULLEY TOOTH GAP DESIGN

Metric pitches T5, T10, T20, AT3, AT5, AT10 and AT20 are available in three tooth gap configurations:

- Normal Backlash Tooth Gap
- Reduced Backlash Tooth Gap "SE"
- Zero Backlash Tooth Gap "0"

Selecting a special pulley tooth gap can increase the accuracy of the timing belt system by decreasing or eliminating "play" between the timing belt and the pulley. Linear drives and systems requiring precise positioning and high repeatability or fast settling times can benefit from reduced "play". The illustrations on the left show the meshing of the timing belt with the 3 tooth gap designs available.

For drive designs using reduced "SE" or "0"-tooth gap pulley, please consult BRECOflex CO., L.L.C. Engineering Department.

Note: For more details, see **Pulley Catalog B216**.

Tooth engagement (AT-Series)

POLYURETHANE TIMING BELTS

ACCESSORY ITEMS FOR POLYURETHANE TIMING BELTS

For more detailed information, please see catalog **B205 "Timing Belt Accessories"**

FIELD WELDER

BRECOflex CO., L.L.C. offers Field Welders for installation and replacement of endless polyurethane timing belts in machinery and equipment on location. No costly and time consuming disassembly is necessary. BRECOflex CO., L.L.C. provides open ended timing belts with prepared belt ends for field welding. Little or no machine disassembly is required for the installation of replacement polyurethane timing belts. Once the timing belt is in place, the Field Welder will fuse the timing belt ends together in about 30 minutes. Only 120V or 240V 60Hz is required – no water cooling is necessary. The result is an endless polyurethane timing belt installed in the field on the most complex machines. The tensile strength of field welded timing belts equals the strength of factory supplied timing belts.

The Field Welder consists of:

- Power cord for standard 120V or 240V 60Hz outlet
- Control box with power button
- Aluminum and steel body with threaded handles for pressure adjustments
- Non-stick coated bottom and top fuser plates

Weight:

Approx. 8.5 lbs (25 mm wide belt)

Available in:

All belt pitches single and double sided in widths from 25 mm to 150 mm

For more technical information on Field Welder Kits please contact the BRECOflex CO., L.L.C. Engineering Department.
